SUMMARY

Senior Backend Engineer with 3.5 years building **Java / Spring Boot microservices** for BFSI and SaaS platforms. Specialised in **event-driven architecture (Kafka)**, **distributed systems**, **PostgreSQL performance tuning**, and **OAuth2/SSO security**. Consistent track record of improving API latency, system availability, and deployment reliability in production environments.

TECHNICAL SKILLS

Languages & Frameworks: Java 17, Spring Boot, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, Microservices
Messaging & Async: Kafka (producer/consumer), Redis Pub/Sub, async processing, event-driven architecture
Databases: PostgreSQL, MySQL, Oracle, MongoDB, Redis (caching & sessions)
Security: OAuth2, OpenID Connect, Keycloak, Okta, Azure AD (SSO/RBAC), JWT, AES-256
Cloud & DevOps: AWS (EC2, S3, CloudWatch), Docker, Kubernetes (basics), Jenkins, GitLab CI/CD, Linux
Reliability & Observability: Resilience4j (circuit breaker, retry), Spring Actuator, structured logging, distributed tracing
Tools: Camunda BPM, Postman, Git, Jira, Agile/Scrum

WORK EXPERIENCE

ACT21 Software Pvt. Ltd., Noida

Oct 2022 – Present

Senior Software Engineer — Java 17, Spring Boot, Kafka, Camunda BPM, Docker, AWS, PostgreSQL, Redis Apr 2025 – Present

- Architected **distributed microservices** for the **HyperTrack SaaS platform** exposing **versioned RESTful APIs** consumed by 10+ internal services; deployed services on **AWS EC2** with artefacts stored in **S3** and health monitored via **CloudWatch** alarms.
- Designed a **rules-driven timesheet engine** with configurable validation rules, hierarchical task mapping, and **async aggregation** using **CompletableFuture** — reducing manual reconciliation effort by ~40%.
- Integrated **Kafka producer/consumer** pipelines for asynchronous event processing between microservices, ensuring **fault-tolerant, idempotent consumers** with dead-letter queue handling for failed events.
- Applied **Resilience4j circuit breakers and retry policies** on all third-party service calls, enabling **graceful degradation** and preventing cascading failures under peak load.
- Optimised **PostgreSQL queries** (covering indexes, partial indexes, EXPLAIN ANALYZE) powering real-time dashboards; reduced **average query latency** by ~35%.
- Designed **multi-level approval workflows** using **Camunda BPM** with RBAC, audit trails, compensating transactions, and escalation paths; established **GitLab CI/CD** pipelines with zero-downtime deployments and automated rollback.
- Led **Docker containerisation** of legacy Linux services and implemented a **centralised monitoring service** (Spring Actuator health checks, structured logging, automated alerts) — cutting environment incidents by ~60%.

Software Engineer — Java, Spring Boot, OAuth2, Keycloak, MySQL, Oracle

Oct 2022 – Apr 2025

- Delivered **high-throughput RESTful microservices** for BFSI workflows under strict SLA requirements, serving as core services within a multi-team product platform processing large transactional volumes.
- Reduced **API latency by 30%** via multi-level **Redis caching**, N+1 elimination through **JPA batch fetching**, connection-pool tuning, and **async processing** for non-blocking background tasks.
- Hardened **platform security** by integrating **SSO and RBAC** using OAuth2, OpenID Connect, Keycloak, Okta, and Azure AD — centralising token validation and eliminating duplicated per-service auth logic across 8+ microservices.
- Implemented **AES-256 payload encryption** for third-party banking integrations and engineered **Oracle stored procedures** supporting high-volume batch processing and scheduled reconciliation pipelines.
- Mentored 2 junior engineers via code reviews and architecture walkthroughs; built **React JS admin dashboards** surfacing operational metrics and reducing ops team resolution time.

PROJECTS

Distributed Property Rental Platform | Java, Spring Boot, Kafka, AWS S3, PostgreSQL, Redis, Docker

- Designed **event-driven microservices** (listings, search, booking) with **Kafka** async communication for eventual consistency; applied **distributed locking** for concurrent reservation conflict resolution, **Redis caching** on search results, and **Resilience4j** circuit breakers on downstream calls.

EDUCATION

Meerut Institute of Engineering & Technology (MIET)

B.Tech — Computer Science & Engineering

Aug 2019 – May 2023

Meerut, India
